X-NUCLEO-IDW01M1	Wi-Fi expansion board based on the SPWF01SA module for STM32 Nucleo

Purpose and benefits

The X-NUCLEO-IDW01M1 Wi-Fi evaluation board is based on the SPWF01SA serial-to-Wi-Fi modules, and provides Wi-Fi expansion to the STM32 Nucleo boards. With the Nucleo environment the user can easily evaluate Wi-Fi connectivity offered by the module in different use case and application scenarios. This is possible thanks to the ability to stack other expansion boards (e.g. with other connectivity links, sensors, or motor control) on top of the X-NUCLEO-IDW01M1, by simply plugging them onto the ST morpho connectors or Arduino UNO R3 connectors.

To allow the maximum compatibility with the other expansion boards, the X-NUCLEO-IDW01M1 has been conceived with different connection options for the 4-wire UART interface and relevant GPIOs. For the complete alternate pin positioning, see user manual UM1975 “Getting started with X-NUCLEO-IDW01M1 Wi-Fi expansion board based on SPWF01SA module for STM32 Nucleo”. The goal of this document is to provide the list of the X-NUCLEO boards with out-of-the-box compatibility with the X-NUCLEO-IDW01M1, and also, for other cases, to offer guidelines on the appropriate selection of the alternate pin positioning on the X-NUCLEO-IDW01M1 to ensure compatibility with the selected X-NUCLEO board.

Description

Table 1 lists the cases in which the X-NUCLEO-IDW01M1 Wi-Fi expansion board is out-of-the-box compatible with other available X-NUCLEO boards. The table also reports the cases where a conflict arises and the operations that must be performed on the X-NUCLEO-IDW01M1 board to ensure its proper functioning in conjunction with the selected X-NUCLEO board.
